Quick Reference: Pruning

An Ounce of Prevention and a Pound of Cure: Tree Pruning

Proper tree pruning is capable of dramatically improving the overall health of a tree. By removing limbs that are no longer effective, careful tree pruning techniques protect the beauty and value of your trees.

When you contract tree pruning services with Autumn Tree Care Experts, Inc., you can be assured that our highly qualified technicians will prune your tree in accordance with the ISA standards for each specimen on your property. Trees are first evaluated for any dead, broken, diseased, or problem branches, which are then removed. Next, any necessary training cuts are made to help the tree maintain its natural growth habit. Then, additional corrective prunings are made to eliminate weak or narrow crotches -- thereby increasing the tree's stability in severe weather conditions.
